**CILINDROS HIDRÁULICO  
SERIE 6020/2**

 ENERFLUID progetta, costruisce e commercializza dal 1981, componenti oleodinamici e oleopneumatici. Con tale impegno ha ottenuto nel 1998 la certificazione del suo Sistema Qualità secondo la norma UNI ISO 9001, con l'obiettivo di soddisfare al meglio la clientela. I prodotti ENERFLUID sono realizzati con macchine CNC ad alta tecnologia. ENERFLUID è presente sul mercato Nazionale, Europeo ed extra Europeo.

 Depuis 1981, la société ENERFLUID conçoit, fabrique et vente ses composants hydrauliques. Cet engagement a permis en 1998 la certification de l'entreprise suivant la norme UNI EN ISO 9001 avec l'objectif de satisfaire au mieux sa clientèle. Les produits ENERFLUID sont réalisés sur machines à commande numérique de haute technologie. ENERFLUID travaille sur le marché National, Européen et Extra-Européen.

 With engagement and perseverance, ENERFLUID has been planning, manufacturing and selling oil-hydraulic and oil-pneumatic components 1981. With this engagements, ENERFLUID got the UNI EN ISO 9001 CERTIFICATION of its quality system in 1998, in order to satisfy better its customers. Its products are manufactured by CNC machine tools with high technology. ENERFLUID sales on the National, European and extra-European market.

 Desde el 1981, la sociedad ENERFLUID proyecta construye y comercializa con empeño y tenacidad sus componentes hidráulicos. Este empeño ha permitido en 1998 la certificación de la sociedad según la norma UNI EN ISO 9001, con l'objetivo de la mejor satisfacción de la clientela. Los productos ENERFLUID son realizados por máquinas CNC de alta tecnología. ENERFLUID obra en el mercado nacional, europeo y extra-europeo.

## **CILINDRI SERIE ECTI**

I cilindri della serie ECTI sono costruiti secondo la normativa ISO 6020/2, con materiali di alta qualità e garantiscono un ottimo livello di efficienza.

### • **PRESSIONE DI UTILIZZO**

#### **CILINDRI ECTI**

Pressione di esercizio continuo fino a 210 bar

Pressione massima non continuativa: fino a picco di 250 bar

#### **CILINDRI ECTM**

Pressione di esercizio continuo fino a 120 bar

Pressione massima non continuativa: fino a picco di 160 bar

A seguire tabella con formula per il calcolo della forza teorica prodotta dal cilindro in fase di spinta e trazione.

---

## **ECTI SERIES CYLINDERS**

*ECTI Series cylinders are manufactured by high quality raw materials under ISO 6020/2 norm and they ensure good efficiency level.*

### • **FUNCTIONING PRESSURE**

#### **ECTI CYLINDERS**

Continue working pressure till 210 bar

Not continue maximum working pressure till the pick of 250 bar

#### **ECTM CYLINDERS**

Continue working pressure till 120 bar

Not continue maximum working pressure till the pick of 160 bar

Table with formulation for calculation of theoretical force produced by the cylinder during thrust and traction phases.

---

## **VÉRINS SERIES CTI**

*Les vérins de la séries ECTI sont produit par des matériaux de très bonne qualité selon la norme ISO 6020/2, ils assurent un bon niveau de efficience.*

### • **PRESSION DE TRAVAIL**

#### **VERINS ECTI**

Pression de travail en continue jusqu'à 210 bar

Pression de travail ne pas en continue jusqu'à le culmine de 250 bar

#### **VERINS ECTM**

Pression de travail en continue jusqu'à 120 bar

Pression de travail ne pas en continue jusqu'à le culmine de 160 bar

Tableau avec formule de calcul de la force théorique développé par le vérin pendant poussé et traction.

---

## **CILINDROS SERIE ECTI**

*Los cilindros serie ECTI estan construidos segundo la norma ISO 6020/2, empleando materiales de alta calidad, aseguran un muy bueno nivel de eficiencia.*

### • **PRESION D'EMPLEO**

#### **CILINDROS ECTI**

Presion d'empleo en continuo hasta 210 bar

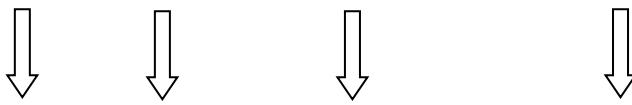

Presion d'empleo non en continuo hasta el pico de 250 bar

#### **CILINDRI ECTM**

Presion d'empleo en continuo hasta 120 bar

Suive tabla con la fórmula para el cálculo de la fuerza teórica producida por el cilindro durante empuje y tracción.

MX3 – Tiranti anteriori

MX5 – Diretto anteriore

MX6 – Diretto posteriore

- **FRENATURA – BRAKING – FREINAGE - FRENADO**

La frenatura viene impiegata sui cilindri nelle applicazioni che prevedono una velocità superiore a 0,1 m/s o nel caso in cui vengano spostati pesi in direzione verticale.

Di seguito la formula per il calcolo della massa frenabile teorica in kg., per ogni cilindro:

*Braking is installed on cylinders when the applications require a speed upper than 0,1 m/sec. or in case is required to move weights in vertical direction.*

*The following relation allows to calculate the theoretical braking mass in kgs., for each cylinder:*

*Le freinage est employé sur les vérins dans les applications qui prévoient une vitesse supérieure à 0,1 m/sec. où dans le cas il faut déplacer des poids en direction verticale*

*La formule suivante permet de calculer la masse théorique freinable en kgs., pour chaque vérin :*

*El frenado es empleado sobre los cilindros en las aplicaciones que necesitan una velocidad superior a 0,1 m/sec. y en el caso de deban mover pesos en sentido vertical.*

A continuación se muestra la fórmula para el cálculo de la masa teórica en frenado en kg., para cada cilindro:

MASSA FRENABILE  
BRAKING MASS  
MASSE FREINABLE  
MASA FRENADO

$$- \frac{(p_2 \times S_1 \text{ o } S_2 - p_1 \times A) \times 2 \times L_1 \text{ o } L_2}{V^2} \times 10^{-2}$$

**p<sub>1</sub>** = Pressione di alimentazione (bar)  
*Feed pressure (bar)*  
*Pression de alimentation (bar)*  
*Presion de alimentacion (bar)*

**p<sub>2</sub>** = Pressione massima (250 bar)  
*Maximum pressure (250 bar)*  
*Pression maxi (250 bar)*  
*Presion maxima (250 bar)*

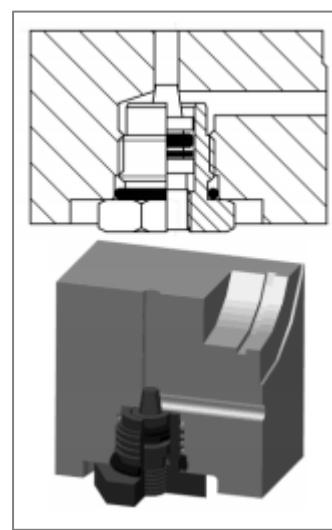

**V** = Velocità di lavoro (m/s)  
*Work speed (m/sec.)*  
*Vitesse de travail (m/sec.)*  
*Velocidad de trabajo (m/sec.)*

• **DISTANZIALE – SPACER – ENTRETOISE - ESPACIADOR**

Possibilità di montaggio di diversi tipi di guarnizioni in relazione a temperatura, tipo di fluido utilizzato, coefficiente di attrito desiderato. Di seguito tabella esplicativa:

It's advisable to mount a spacer in the cylinders upper than 1000 mm stroke, to better the drive-ability of rod and piston.

Il est indiqué de monter un entretoise dans les vérins qui font plus que 1000 mm de course, pour améliorer le guidage de tige et du piston,

Es aconsejable montar un espaciador en los cilindros con carreras más largas de 1000 mm, para mejorar la capacidad de conducción de vástago y pistón.

• **GUARNIZIONI – SEALS – JOINTS - JUNTAS**

Possibilità di montaggio di diversi tipi di guarnizioni in relazione a temperatura, tipo di fluido utilizzato, coefficiente di attrito desiderato. Di seguito tabella esplicativa:

It's possible to mount many types of seals, in relation to working temperature, type of oil used, friction coefficient required. See at the following table:

Il est possible le montage de plusieurs types de joints, selon la température de travail, le type d'huile, le coefficient de frottement désiré. Voir le tableau ci-dessous:

Posibilidad de montaje de los diferentes tipos de juntas en relación a la temperatura, tipo de fluido utilizado, coeficiente de fricción deseado. Consulte la tabla

**POSIZIONE CONNESSIONI, AMMORTIZZO E SFIATI ARIA**

Per tutti i fissaggi, a eccezione del tipo MS2, le connessioni sono posizionate sul lato 1, le regolazioni di ammortizzo sul lato 3 gli sfiati aria sul lato 2.

Per il fissaggio tipo MS2 le connessioni sono poste sul lato 1, le regolazioni di ammortizzo sul lato 4 e gli sfiati aria sul lato 2.

**FASTENING POSITION, ABSORBER REGULATION AND AIR BREATHER**

All fastenings, excepting MS2 type, have connections positioned on side 1, the absorber regulations on side 3 and air breathers on side 2.

Fastening type MS2 has connections positioned on side 1, the absorber regulations on side 4 and air breathers on side 2.

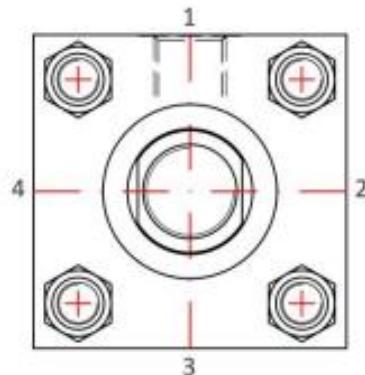

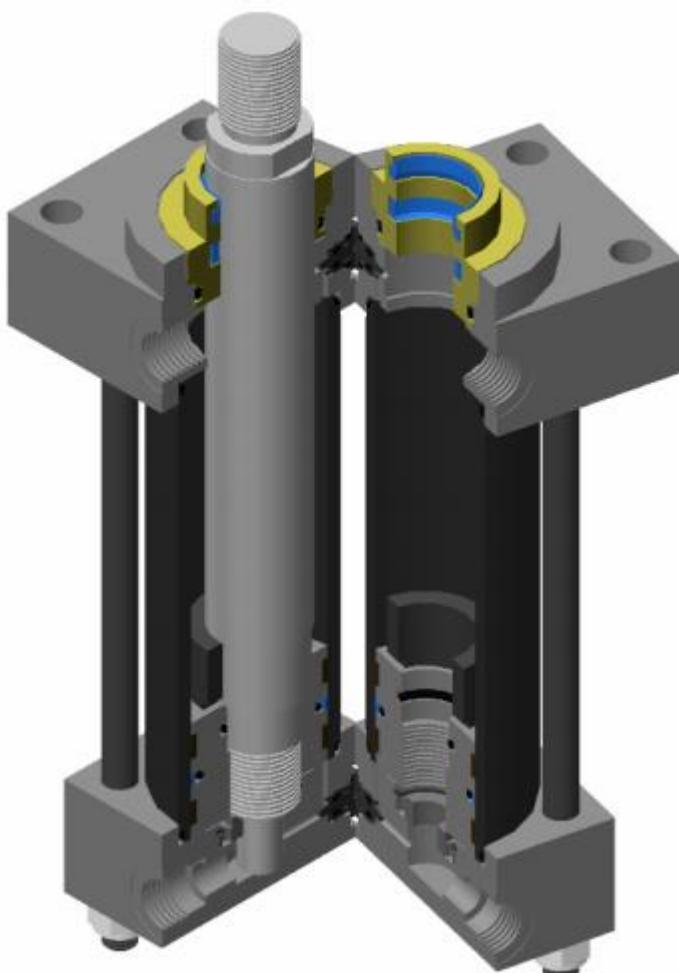

**POSITION DES FIXATIONS, REGULATIONS DE L'AMMORTISSEUR ET ECHAPPEMENTS D'AIR**

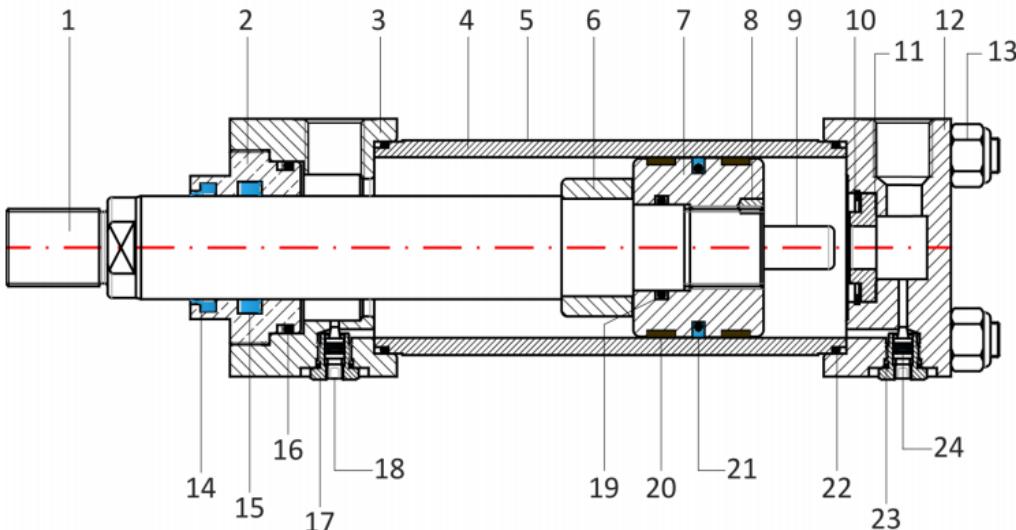

Pour tous les fixations, sauf que le type MS2, les connections sont positionnés sur le côté 1, les régulations de l'amortisseur sur le côté 3 et les échappements d'air sur le côté 2.

Sur le type MS2 les connections sont positionnés sur le côté 1, les régulations de l'amortisseur sur le côté 4 et les échappements d'air sur le côté 2.

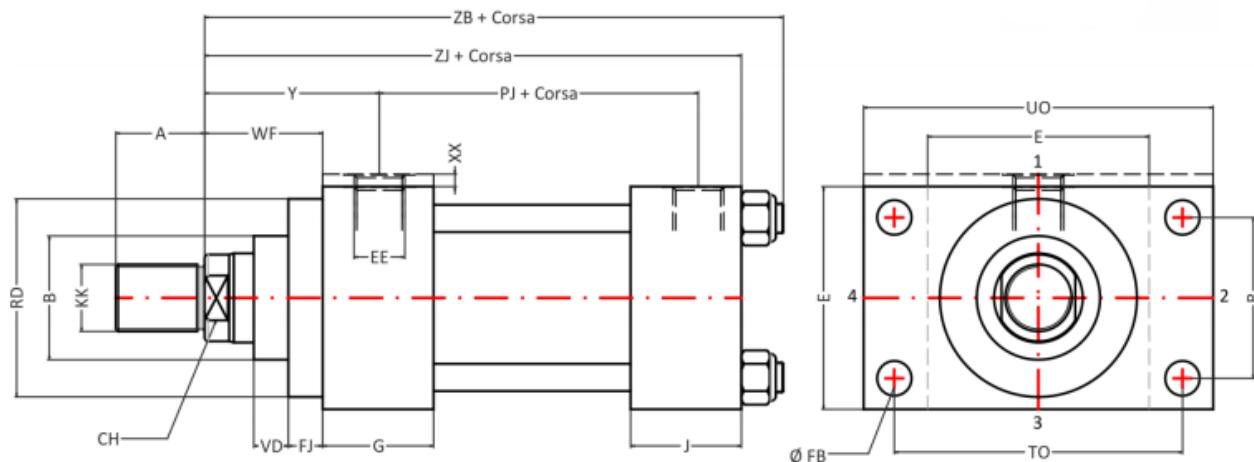

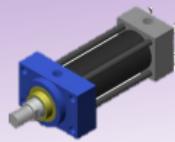

**POSICIONES DE LAS CONEXIONES, REGULACIONES DE L'AMORTIZATE Y VENTILACION DE L'AIRE**

Todas las conexiones, menos que el tipo MS2, estan positionado sul lado 1, las regulaciones de l'amortizate sul lado 3 y la ventilación de l'aire sul lado 2. En el tipo MS2, las conexiones estan positionado sul lado 1, las regulaciones de l'amortizate sul lado 4 y la ventilación de l'aire sul lado 2

# SENSORI PER CILINDRI MAGNETICI ETCM

## SENSORS FOR MAGNETIC CYLINDER ETCM

## CAPTEURS POUR VERINS MAGNETIQUES ETCM

## SENSORES PARA CILINDROS MAGNETICOS ETCM

I cilindri della serie ETCM sono predisposti per l'utilizzo di sensori magnetici da montare sui tiranti tramite un'apposita staffa. Il segnale generato da questi sensori viene utilizzato per eseguire azionamenti in posizione intermedia o in prossimità del finecorsa del pistone.

*Cylinders ETCM series can be equipped by magnetic sensors that can be mounted on tie rods by bracket. The signal generated allows drives in an intermediate position or near the limit of the piston.*

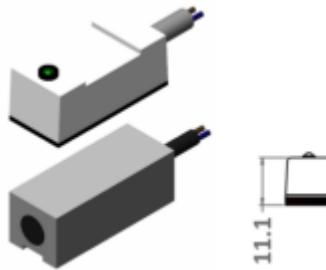

Les cylindres de la série ETCM peuvent être équipés par de capteurs magnétiques à monter sur les tirants par un étrier. Le signal généré permet les actionnement dans une position intermédiaire ou en proximité de la limite du piston.

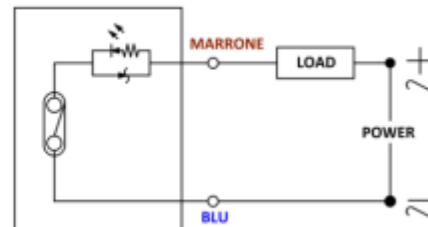

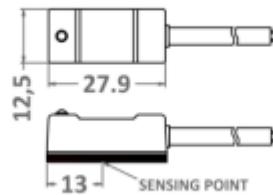

Cilindros de la serie ETCM pueden ser equipados con sensores magnéticos montados sobre los pernos a través del soporte. La señal generada permite salidas en una posición intermedia o cerca del final del pistón.
